# EECE.2160: ECE Application Programming 

Fall 2017

## Lecture 13: Key Questions

October 6, 2017
In today's exercise, you will write a program that does the following:

- Prompts the user to enter a single input character followed by an integer, n.
- If not correctly formatted, print error, clear rest of line, and repeat prompt
- Depending on the character entered, do the following:
- ' $F$ ' or ' $f$ ': Compute and print the factorial of $n, n$ !
- For example, if the user enters $\mathbf{F} 5$, print 5 ! $=120$
- ' $P$ ' or ' $p$ ': Compute $2^{n}$, but only if $n>=0$.
- For example, if the user enters $\mathbf{p}$ 2, print $\mathbf{2 ヘ 2}^{\wedge} \mathbf{2} \mathbf{4}$
- Print an error if $\mathrm{n}<0$.
- ' $X$ ' or ' $x$ ': Exit the program
- In all other cases, print an error:
- For example: Invalid command Z entered
- If the user enters any command other than ' $x$ ' or ' $x$ ', return to the initial prompt and repeat the program.

Steps in the programming exercise:

1. Draw a general flowchart for the overall program flow.

- Treat each of the processes listed in part 2 as a single block-don't worry about the details just yet.

2. Draw smaller flowcharts and then write code for:

- Reading the input character \& integer until correct.
- Computing n ! (in a later lecture)
- Computing $2^{\mathrm{n}}$ if $\mathrm{n}>=0$ and printing an error otherwise. (in a later lecture)

## Space to draw flowchart/code for overall program flow:

Flowchart/code for reading input character until correct:
