EECE.2160: ECE Application Programming

Spring 2016

Lecture 15: Key Questions February 29, 2016

- 1. <u>Example:</u> Write a function to do each of the following. Note that only the function name is listed—you must determine the return type and argument list.
- a. printLine(): Takes an integer, length, as an argument and prints "length" dashes on a single line

b. checkEvenOdd(): Reads an integer value from the console input (i.e., an integer typed by the user as input) and returns 1 if the value is even, 0 if it's odd
