

# EECE.2160: ECE Application Programming

Summer 2018

## Lecture 14: Key Questions

June 27, 2018

### QUESTIONS:

1. Review the operation of bitwise (AND, OR, XOR, NOT) and bit shift operators
2. Describe how in general, you perform the operations below on a bit or range of bits:
  - a. Setting bit(s) (desired bit(s) = 1, all others unchanged)
  - b. Clearing bit(s) (desired bit(s) = 0, all others unchanged)
  - c. Flipping bit(s) (desired bit(s) change from  $0 \rightarrow 1$  or  $1 \rightarrow 0$ , all others unchanged)
3. Describe how to extract a group of bits from a larger value.

**EXAMPLES:**

1. Evaluate each of the following expressions if you have the following unsigned int variables:  $A = 7$ ,  $B = 10$ , and  $C = 0xFFFFFFFF$

a.  $A \& B$

b.  $A \mid \sim B$

c.  $A \wedge C$

d.  $A \ll 4$

e.  $B \gg 5$

f.  $A \mid (B \ll 2)$

2. Given an unsigned `int`, `n`, and a number, `b`, how would you:
- Clear all bits of `n`?
  - Clear the lower 16 bits of `n` (mask out lower bits)?
  - Flip all bits of `n`?
  - Flip bit `b` of `n`?
  - Set bit `b` of `n` (i.e., make sure bit `b` is 1)?
  - Clear bit `b` of `n` (i.e., make sure bit `b` is 0)?
