EECE.2160: ECE Application Programming

Fall 2016

Lecture 15: Key Questions February 24, 2016

1.	Example: Write a function to do each of the following. Note that only the function name is
	listed—you must determine the return type and argument list.

a.	<pre>printLine():</pre>	Takes an	integer,	length,	as an	argument	and prints	"length"	dashes	on a
	single line									

b. checkEvenOdd (): Reads an integer value from the console input (i.e., an integer typed by the user as input) and returns 1 if the value is even, 0 if it's odd
